Today, I'd like to talk about a natural disaster that affects many parts of the world - floods. Floods are caused by heavy rain, melting snow, hurricanes, or tropical storms. They can make rivers, lakes, and coastal areas overflow, leading to serious problems.

Floods can be very dangerous. They can harm people's lives, damage homes, farms, and roads. They can also pollute water, spread diseases, and harm nature.

To reduce flood risks, we need better flood warnings, improved city planning, and efforts to protect natural defenses like rivers and wetlands. It's also important to raise awareness among the public. By working together and taking preventive measures, we can better deal with the challenges floods bring and protect our communities and the environment. Thank you.
